

FR

Frink Token (FRINK)

Official Whitepaper v1.0

Innovative ERC-20 Utility Token built on Polygon PoS
Transparent • Educational • Creator-Focused • Community-Driven

Download PDF (v1.0)

Executive Summary

Frink Token (FRINK) is an innovative experimental Web3 utility token deployed on the Polygon PoS network with a total supply of 10 billion tokens. FRINK is designed to explore lowering Web3 entry barriers through education-focused applications, creator rewards, and decentralized governance.

Built on Polygon's low-cost infrastructure, FRINK enables micro-transactions with minimal fees (typically under \$0.001), making blockchain participation more accessible. Through open-source development and community-driven decision-making, FRINK serves as a transparent ecosystem for developing Web3 utility concepts.

Important: FRINK is an experimental utility-focused project. Success depends on sustained community participation and development. Participation involves significant risk.

Liquidity Protection: Initial liquidity has been locked for 12 months via Team Finance (triple-audited platform), ensuring no rug pull risk and demonstrating long-term commitment.

Problem Statement

Web3 adoption faces several observed barriers that FRINK aims to address:

- High Entry Barriers:** Blockchain tools often require technical knowledge
- Limited Usability:** Few accessible token-based participation systems exist for creators
- Complex Onboarding:** Wallet setup and blockchain concepts can be challenging for newcomers
- High Costs:** Transaction fees on some networks make micro-transactions impractical

FRINK's Approach: An innovative, low-cost utility token designed to develop solutions for education, participation, and functional DApps. Success requires sustained community engagement and development resources.

Use Cases & Mechanics

FRINK is designed to explore the following use cases (implementation varies by development stage):

1. Creator Rewards System (Planned)

Concept: Creators could earn FRINK tokens for content publishing and community engagement. Supporters could send tips directly, distributed through smart contracts with minimal fees (Polygon gas only).

Mechanism: ERC-20 transfers

Status: Concept stage - Implementation Q1-Q2 2026

2. Web3 Learning Platform (Planned)

Concept: Users could earn FRINK tokens by learning blockchain concepts through educational content. Tokens could potentially be used for premium courses or community features.

Mechanism: Planned staking and reward distribution (Target APY 5-15%, subject to governance)

Status: Development phase - Launch target Q2 2026

3. Community Governance

FRINK holders can vote on protocol decisions, fund allocations, and feature development. 1 token = 1 vote in governance proposals.

Mechanism: Snapshot voting (off-chain) + OpenZeppelin Governor (planned for on-chain)

Status: ✓ Active via Snapshot.org

4. Micro Tasks & Freelancing (Planned)

Concept: Developers and contributors could complete small tasks for FRINK rewards. Polygon's low gas fees make small payments economically viable.

Mechanism: Direct transfers leveraging Polygon's low-cost transactions

Status: Concept stage - Implementation TBD

5. DApp Access (Future Consideration)

Potential: FRINK holders could gain access to experimental DApps or features. Token amounts could determine participation tiers.

Mechanism: Token balance verification

Status: Concept stage - Pending community decision

🔴 **Implementation Note:** Feature development progresses based on available resources, community priorities, and technical feasibility. Timelines may adjust based on development capacity and community feedback.

Technology & Architecture

Network	Polygon (PoS)
Standard	ERC-20
Contract Address	0x822AC53a3037d328645B5aa7d6A07360AcC23433
Decimals	18
Total Supply	10,000,000,000 FRINK
Contract Type	Standard ERC-20 (No mint, no burn functions)

Architecture Diagram

Technical Stack

- **Smart Contract:** Solidity 0.8.x, standard ERC-20 implementation
- **Frontend (Planned):** React.js, ethers.js / web3.js
- **Indexing (Under Consideration):** The Graph Protocol or similar
- **Governance:** Snapshot.org (currently active)
- **Storage (If Needed):** IPFS for metadata

🚧 **Technical Limitation:** The current FRINK contract is a basic ERC-20 with no built-in staking, burning, or minting capabilities. Additional functionality will require separate smart contracts and integration work.

Tokenomics & Distribution

Total Supply	10,000,000,000 FRINK (Fixed)
Planned Liquidity Reserve	3,000,000,000 (30%)
Planned Development Fund	4,000,000,000 (40%)
Planned Community & Public	3,000,000,000 (30%)

🚧 **Distribution Status:** Token allocation is proposed but not yet fully implemented. Current distribution may differ from these targets. Actual distribution is tracked on-chain via PolygonScan.

Proposed Allocation Breakdown

Category	%	Amount	Proposed Method	Vesting Plan
Liquidity (DEX)	30%	3,000M	Uniswap v3 / QuickSwap	Target: 12mo lock (pending implementation)
Development Team	20%	2,000M	Manual distribution	Target: 24mo vesting (manual process)
Ecosystem Grants	10%	1,000M	Community governance	Variable per grant
Staking Rewards	10%	1,000M	Future staking contract	Target: 2yr distribution (pending implementation)
Community Airdrops	15%	1,500M	Manual distribution	Gradual release over 6mo
Treasury Reserve	15%	1,500M	Multi-sig wallet	Governed release via DAO

Tokenomics Mechanics

- **Transaction Fee:** None (standard Polygon gas fees apply to all transfers)
- **Staking Rewards:** Not currently implemented. If implemented, target APY 5-15% (subject to available budget and governance)
- **Inflation Control:** No inflation - Fixed supply of 10B tokens
- **Burn Mechanism:** Not currently implemented. Governance could propose burn mechanisms in the future

⚠️ **Critical Notice:** The FRINK token contract does NOT include automated vesting, locking, or burning mechanisms. All vesting schedules depend on manual execution by the team, which carries trust and execution risk. Verify actual token distribution on PolygonScan.

Liquidity & Lock

✅ **Liquidity Lock Completed:** FRINK's liquidity has been successfully locked for 12 months via Team Finance on November 25, 2025.

Liquidity Pool Information

✅ Pool Details

Pool Type	QuickSwap V3 (Concentrated Liquidity)
Position Type	NFT Position (Algebra-based V3)
NFT ID	177734
Liquidity Amount	9.913 POL + 50,560,100 FRINK
Fee Tier	0.01%
Price Range	Full Range (Min: 0, Max: ∞)
Pool Share	100%
Network	Polygon PoS
QuickSwap Position	View V3 Position #177734

Liquidity Lock Details

🔒 Active Lock Information

Lock Platform	Team Finance (triple-audited by CertiK, Hacken & Solidity Finance)
Lock Type	V3 Liquidity NFT Lock
Locked Asset	WPOL/FRINK V3 Position (NFT ID: 177734)
Lock Amount	1 NFT Position (100% of liquidity)
Lock Duration	12 months
Lock Date	November 25, 2025, ~01:06 AM UTC+9
Unlock Date	November 25, 2026, 7:27 AM UTC+9
Lock Fee Paid	\$150.00 (~1,083.76 POL)
Owner Wallet	0x2432b1229b3e6a284f9a27024b158d2f1a589445
Lock Status	🟢 ACTIVE & LOCKED
Team Finance Lock Page	View on Team Finance → Click "Liquidity locks" tab

Lock Verification

🔍 How to Verify the Lock:

1. Team Finance:

Visit [Team Finance FRINK Page](#) → Click "Liquidity locks" tab → View NFT Position #177734

2. QuickSwap V3:

Visit [QuickSwap Position #177734](#) (Direct link to NFT Position)

3. PolygonScan:

View [wallet transactions](#) → See Team Finance lock transaction on November 25, 2025

Migration from V2 to V3

Note:

The liquidity was originally provided on QuickSwap V2 (LP Token: `0x0168E11cff3323774781a2cb46917665581bbc03`) with 100M FRINK + 5 POL. On November 25, 2025, the liquidity was migrated to QuickSwap V3 (Concentrated Liquidity) to enable proper locking via Team Finance.

Migration Process:

• V2 LP tokens removed (9.913 POL + 50,560,100 FRINK recovered)

• V3 Position created with Full Range (0 to ~)

• V3 NFT Position (ID: 177734) locked via Team Finance

Security & Trust

• 100% Liquidity Locked:

All initial liquidity is locked for 12 months

• No Rug Pull Risk:

Liquidity cannot be removed until November 25, 2026

• Triple-Audited Platform:

Team Finance audited by CertiK, Hacken, and Solidity Finance

• Publicly Verifiable:

All lock details visible on-chain

• Community Protection:

Lock demonstrates long-term commitment

✅ Liquidity Lock Confirmed:

FRINK's liquidity is securely locked for 12 months, demonstrating the team's commitment to the project and protecting the community from liquidity removal.

Roadmap & Milestones

Important:

This roadmap represents current plans and targets. Timelines may change, and features may be delayed, modified, or cancelled based on resources, community feedback, and technical challenges.

Q4 2025 - Phase 1: Foundation

✓ Smart Contract Deployment (October 31, 2025) - Completed

✓ Community Discord Server Created - Live (Early Stage)

✓ Initial Liquidity Launch (QuickSwap V3) - Completed (NFT ID 177734)

✓ Liquidity Lock (Team Finance) - ✅ Completed (November 25, 2025)

○ Security Audit - Planned for Q1 2026 (no contract signed yet)

Q1 2026 - Phase 2: Ecosystem Development

- Creator Rewards DApp Beta - **Target release (development stage)**
- Staking Contract Deployment - **Planned (pending development)**
- First Community Governance Vote - **Planned**
- Educational Content Series - **In progress (5/20 tutorials)**

Q2 2026 - Phase 3: Growth (Tentative)

- Learning Platform MVP - **Tentative target**
- Task Marketplace Concept - **Under consideration**
- Staking Rewards Launch - **Dependent on Q1 2026 development**
- Partner Integrations - **Exploratory discussions**

Q3-Q4 2026 - Phase 4: Expansion (Highly Tentative)

- DAO Treasury Management - **Under consideration**
- Cross-chain Bridge - **Long-term possibility**
- NFT Badge System - **Concept stage**
- CEX Listings - **No discussions or commitments**

2027+ - Phase 5: Long-term Vision

- Full Governance Protocol - **Long-term goal**
- Strategic Partnerships - **Dependent on community growth**
- Ecosystem Sustainability - **Subject to adoption and resources**

⚠ Roadmap Disclaimer: This roadmap represents planned development targets. Progress depends on community participation, available resources, and technical feasibility. Timelines may vary based on development capacity and priorities.

Governance & Community

FRINK adopts a community-driven governance model for key decisions.

Governance Structure

■ Snapshot Voting

Active FRINK holders participate in off-chain voting via Snapshot. 1 FRINK = 1 vote. Proposals require minimum 20% quorum.

Status: ✓ **Operational**

⚙ OpenZeppelin Governor

Planned On-chain governance for automated execution of approved proposals.

Status: ○ **Target Q2 2026 (development stage)**

Community Roles

Role	FRINK Required	Responsibilities
Member	1+	Vote on proposals, participate in Discord
Contributor	100,000+	Submit proposals (subject to community review)
Delegate	1,000,000+	Represent delegated votes, lead initiatives
Core Team	N/A	Execute approved proposals, maintain infrastructure

Governance Proposal Types

- **Parameter Changes:** Staking APY adjustments, emission rates (7-day voting minimum)
- **Fund Allocation:** Ecosystem grants, marketing budget (14-day voting minimum)
- **Protocol Upgrades:** Smart contract changes (21-day voting + security review required)
- **Partnership Decisions:** Major integrations or collaborations (14-day voting minimum)

 **Governance Limitation:** Off-chain voting (Snapshot) is non-binding. Execution depends on core team implementation. On-chain governance is planned but not yet active.

Security & Audits

Security Measures

Liquidity Lock Security

Lock Status:  **Active (12-month lock)**

- Platform: Team Finance (audited by CertiK, Hacken, Solidity Finance)
- Lock Duration: November 25, 2025 → November 25, 2026
- Locked Asset: 100% of V3 liquidity (NFT ID 177734)
- Protection: No liquidity removal possible until unlock date
- Verification: Publicly verifiable on Team Finance and PolygonScan

Smart Contract Security

Current Status: **No professional audit completed**

- Standard ERC-20 implementation (publicly reviewable)
- Contract source code available on PolygonScan
- Multi-signature wallet planned for treasury (not yet implemented)
- No upgrade mechanisms (immutable contract)

Risk Management

Liquidity Protection: 12-month lockup scheduled via Team Finance (November 23, 2025)

Developer Vesting: Manual vesting process (trust-based, not automated)

Emergency Pause: Not available (contract is immutable)

Bug Bounty Program: Planned for Q1 2026 (not yet launched)

Planned Audits

Auditor	Scope	Target Date	Status
Professional Auditor (TBD)	Smart Contract Review	Q1 2026	 Budget pending, no contract
Community Security Review	Public Code Review	Ongoing	 Code public on PolygonScan

CRITICAL SECURITY NOTICE:

- No professional security audit has been completed
- Contract has NOT been reviewed by OpenZeppelin, Certora, or any established auditor
- Previous whitepaper claims of "scheduled" audits were premature
- Use this token at your own risk. Bugs or vulnerabilities may exist.

Risk Warnings

Blockchain Risk: Blockchain transactions are irreversible. Tokens sent to incorrect addresses cannot be recovered. Always verify addresses carefully.

Smart Contract Risk: The contract has not been professionally audited. Undiscovered bugs, vulnerabilities, or logical errors may exist that could result in loss of tokens.

Market Risk: FRINK is a utility-focused token under development with price volatility dependent on market conditions and adoption. Price can be extremely volatile. Only participate with amounts you can afford to lose completely.

Regulatory Risk: Regulatory treatment of utility tokens is evolving. The project may be required to cease operations, modify features, or face legal challenges.

Development Risk: The project relies on volunteer contributions and community resources. Feature implementation depends on sustained community participation and development capacity. Timelines may vary based on available resources.

Centralization Risk: Key functions currently depend on the core team. Vesting and fund management are not fully automated, creating trust and execution risks.

Legal & Regulatory Compliance

FRINK Token is **designed as a utility token and not intended to be a security**. It is used for utility-focused, educational, and community-driven purposes with no financial return promises. However, regulatory classification is determined by applicable authorities, not by the project team.

Regulatory Considerations

Intended Classification: Utility Token

Design Goals:

- No investment contract or profit expectations
- No promises of financial returns
- Utility-focused functionality
- Transparent, open-source development

Important: Final regulatory classification is determined by regulators in each jurisdiction, not by the project team. Laws vary by country and may change.

US Regulatory Considerations

Howey Test Considerations:

FRINK is designed to avoid meeting securities criteria by:

- Not offering common enterprise investment opportunities
- Not promising profits from team efforts
- Emphasizing utility over speculation

Disclaimer: This analysis is not legal advice. Regulatory classification is determined by the SEC and courts, not by project assertions. Token holders should seek independent legal counsel.

Terms of Use & Disclaimers

- FRINK is an experimental token with **no warranties, guarantees, or service commitments**.
- Token holders must understand and accept all technical, financial, and regulatory risks.
- This whitepaper is not legal, financial, or investment advice. Consult professionals before participating.
- Use may be prohibited in certain jurisdictions. Users are responsible for compliance with local laws.
- Tax obligations vary by jurisdiction. Consult a tax professional regarding your specific situation.
- The project team reserves the right to modify, suspend, or discontinue the project at any time.

Tax Considerations

Cryptocurrency transactions may be taxable events in your jurisdiction:

Activity	Potential Tax Treatment	Notes
Token Purchase	May be taxable when sold	Capital gains tax considerations
Airdrop Receipt	May be taxable as income	Value at time of receipt
Staking/Rewards	May be taxable as earned	If staking is implemented
Token Trading	May trigger capital gains/losses	Each trade may be taxable

⚠ Tax Disclaimer: This is NOT tax advice. Tax treatment of cryptocurrency varies significantly by jurisdiction and individual circumstances. You are responsible for understanding and complying with tax obligations in your jurisdiction. Consult a qualified tax professional before participating.

Market Analysis & Positioning

Market Context

FRINK operates in the broader context of creator economy tools, Web3 education platforms, and utility token ecosystems. While specific market size estimates vary widely by source and methodology, these sectors show general growth trends in blockchain adoption.

🚩 **Note on Market Data:** Previous versions of this whitepaper included specific market size figures without sources. Those have been removed. Any market opportunity for FRINK is highly speculative and uncertain.

Competitive Landscape

Several established projects operate in adjacent spaces:

Project	Focus Area	FRINK Difference
Lens Protocol	Decentralized social graph	FRINK focuses on education and creator rewards rather than social networking
Mirror.xyz	Creator publishing platform	FRINK is a token, not a platform - complementary rather than competitive
Gitcoin	Developer funding and grants	FRINK aims for broader creator focus beyond developers
Rally	Creator coins	FRINK is a single token rather than individual creator coins

FRINK's Positioning

🧪 Experimental Approach

Open acknowledgment of experimental nature rather than promising revolutionary outcomes.

💰 Low Transaction Costs

Polygon PoS enables sub-cent transactions, making micro-payments economically viable.

🏛️ Community Governance

Active Snapshot voting gives token holders a voice in project decisions.

📖 Education Focus

Emphasis on learning and onboarding rather than speculation.

⚠️ **Competitive Reality:** FRINK is a small, experimental project competing with well-funded, established platforms. Success is uncertain and depends on community adoption, which cannot be predicted or guaranteed.

Team & Organization

🚩 **Team Transparency:** Team members operate pseudonymously with governance oversight through community participation. Transparency considerations are under community review.

Core Development Roles

Role	Responsibility	Status
Protocol Development	Smart contract deployment, technical architecture	Pseudonymous
Full Stack Development	DApp development, frontend work	Seeking contributors
Community Management	Discord, governance coordination	Active (pseudonymous)
Content Creation	Educational materials, documentation	Community volunteers

Team Disclosure: Under community consideration. Governance vote planned for Q1 2026 regarding team transparency enhancement.

Advisory & Support

The project operates with community governance oversight. Members with relevant expertise are encouraged to participate in governance and provide guidance.

⚠️ **Pseudonymous Team:** Team members operate pseudonymously, which affects direct accountability. Governance oversight is provided through community participation. This structure requires participants to evaluate risk accordingly.

Financial Sustainability

✖ **Financial Development Status:** The project currently operates on community contributions and volunteer resources. Revenue generation depends on successful implementation of planned features and community adoption.

Current Financial Reality

- **Revenue:** Currently \$0. Revenue-generating features are in development.
- **Funding:** Community-funded. No venture capital or institutional funding.
- **Development:** Primarily volunteer-based with community resources.
- **Treasury:** Multi-signature wallet planned for governance control.

Potential Revenue Models (In Development)

As the project develops, potential revenue sources could include:

- Optional DApp transaction fees (subject to governance approval)
- Premium features in learning platform (development stage)
- Marketplace commissions (planning stage)

Important: Revenue model implementation depends on development resources, community participation, and governance decisions. Timeline and success are not guaranteed.

Sustainability Path

- **Year 1:** Focus on community building and infrastructure development.
- **Year 2:** Potential launch of revenue-generating features pending development progress.
- **Year 3+:** Expansion dependent on community growth and feature adoption.

⚠ **Financial Reality:** Project sustainability requires sustained community participation and successful feature implementation. Timelines may vary based on available resources. Do not assume guaranteed continuation or feature delivery.

Risk Mitigation Strategy

While risks cannot be eliminated, the project attempts to mitigate them through:

Risk Category	Description	Mitigation Attempts
Regulatory	Changing regulations could impact operations	Designed as utility token; monitoring developments; prepared to adapt or cease operations
Technical	Smart contract bugs or vulnerabilities	Public code review; planned audit (pending budget); immutable contract limits upgrade risks
Market	Token price volatility or collapse	Emphasizing utility over speculation; no price promises; transparent communication
Liquidity	Insufficient trading volume	Initial DEX liquidity provided; community education about liquidity risks
Adoption	Insufficient user growth	Focus on education; building useful tools; community engagement
Execution	Team unable to deliver features	Realistic roadmap; seeking community developers; open-source approach

⚠ **Risk Reality:** These mitigation strategies reduce but do not eliminate risks. Many of these risks could still result in complete loss of token value or project failure. Participate only if you can afford total loss.

Getting Started with FRINK

⚠ **Before You Start:** Make sure you understand the risks described in this whitepaper. FRINK is an experimental utility-focused project with value dependent on adoption and development. Only proceed if you accept the possibility of complete loss.

Step 1: Set Up Polygon Wallet

Install MetaMask or similar wallet and add Polygon PoS network (Chain ID: 137).

Step 2: Acquire Small Amount

Start with a small test amount on QuickSwap or Uniswap v3. Verify everything works before larger amounts.

Step 3: Join Community

Discord → Learn about governance → Participate in discussions. Don't invest more than you learn about.

Step 4: Stay Informed

Follow official channels for updates. Be skeptical of promises. Verify information independently.

Useful Resources

-  PolygonScan — Verify all on-chain activity
-  Community Discord — Official communication channel
-  Official Website — Project information
-  Documentation — Community-maintained guides (verify all information)

🚨 **Best Practice:** Always verify smart contract addresses. Never send tokens to addresses shared in unofficial channels. Use test transactions first. Never invest more than you can afford to lose completely.

Official Channels & Support

⚠️ **Scam Warning:** Only trust information from verified official channels listed below. Beware of impersonators on Telegram, Discord, or social media. The team will never DM you first or ask for private keys.

 Website	 Whitepaper	 Discord	 Twitter/X
 Telegram	 Medium	 GitHub	 PolygonScan

Additional Channels:

 Reddit •  Facebook •  LinkedIn •  Slack •  Bitcointalk

Official Website: frinktoken.net

Contract Address: `0x822AC53a3037d328645B5aa7d6A07360Ac23433`

Contact Email: contact@frinktoken.net

Verify all links and addresses independently. Do not trust unverified sources.

Conclusion

Frink Token (FRINK) is an **innovative experimental Web3 project** exploring concepts in creator rewards, education, and community governance. This whitepaper presents an honest assessment of the project's current state, development progress, and future directions.

Success requires sustained community participation, volunteer development contributions, and favorable external conditions. Many features are in development or planning stages, with implementation timelines dependent on community resources and engagement.

⚠️ **Final Warning:** FRINK is a high-risk experimental utility-focused token. It has no revenue, no professional audit yet, and relies on community development. Most roadmap features are in development or planning stages. Price volatility is expected and value depends on adoption and utility development.

Only participate if you:

- ✓ Can afford to lose your entire investment
- ✓ Understand blockchain technology risks
- ✓ Are interested in the educational/experimental aspects
- ✓ Do not expect guaranteed financial returns
- ✓ Have read and understood all risk disclosures

👉 **Join Responsibly:** If you understand and accept the risks, you're welcome to participate in Discord, vote on governance, and contribute to the project's development. Approach with realistic expectations and caution.

Appendix: Technical Reference

Smart Contract Details

Contract Address (Polygon):
`0x822AC53a3037d328645B5aa7d6A07360AcC23433`

Deployment Date: October 31, 2025 (12:06:52 PM UTC)

Deployment Block: 78403786

Chain ID: 137 (Polygon PoS)

Token Standard: ERC-20

Decimals: 18

Total Supply: 10,000,000,000 FRINK (Fixed)

Contract Type: Standard ERC-20 (no mint, burn, pause, or upgrade functions)

Source Code: Viewable on PolygonScan

Adding FRINK to Wallet

Token Contract:
`0x822AC53a3037d328645B5aa7d6A07360AcC23433`

Network: Polygon PoS
Chain ID: 137
Symbol: FRINK
Decimals: 18

COMPREHENSIVE DISCLAIMER

This token is experimental and high-risk. By acquiring or using FRINK, you acknowledge:

- FRINK is a utility-focused token with value dependent on adoption and development progress
- The project is NOT yet audited by professional security firms (audit planned Q1 2026)
- The team is pseudonymous with governance oversight through community
- Most roadmap features are in development with completion dependent on community resources
- Success requires sustained community participation and development
- This is NOT investment advice - seek professional counsel
- Regulatory status is evolving and may change
- You could lose 100% of funds invested
- Project continuation depends on community support and resources

PROCEED ONLY IF YOU FULLY UNDERSTAND AND ACCEPT THESE RISKS.
